

The fast and effective post-hygiene whitening treatment BlancOne<sup>®</sup> CLICK is a fast whitening treatment designed for those who are looking for a practical and fast way to obtain a whiter smile after a dental hygiene session.

You need just 10 minutes and a budget of only a few Rands to obtain surprising results and give your teeth a brighter appearance! BlancOne<sup>®</sup> CLICK is also ideal to become more familiar with teeth whitening, even for those who are afraid of excessive sensitivity caused by these whitening treatments. Even if we can state that all BlancOne treatments have practically eliminated the sensitivity problem, BlancOne<sup>®</sup> CLICK is certainly the most delicate treatment of the entire line because:

- it uses a low concentration of carbamide peroxide (16%)
- it requires no gingival protection
- it takes only 10 minutes

After having tried BlancOne<sup>®</sup> CLICK you can decide to obtain even deeper and longer lasting results merely through a simple upgrade of a complete BlancOne<sup>®</sup> TOUCH or ULTRA treatment.

### How BlancOne<sup>®</sup> CLICK works

After mixing **BlancOne<sup>®</sup> CLICK**'s two components, the whitener and the activator, the gel will be applied to the teeth and irradiated with a special blue light for 10 minutes.

Thanks to its **special formulation** and utilising light energy, the **oxygen generated** will not be dispersed externally (the gel swells), but will remain trapped in the gel and completely conveyed toward the enamel, **maximising the whitening action**.

Thanks to its specific **action mechanism**, BlancOne<sup>®</sup> CLICK offers **effective whitening** using a **low concentration** of hydrogen peroxide.

**BlancOne<sup>®</sup> CLICK** does not dehydrate enamel and **does not cause sensitivity** and, like all BlancOne<sup>®</sup> treatments, does not contain desensitising and remineralising agents.

Ask us for **BlancOne<sup>®</sup> CLICK** each time you clean your teeth: a white and bright smile is just one click away!
